

**Confirmed participants from the Netherlands sector and short descriptions of services offered**

**CGI Nederland B.V.** - <https://www.cgi.com/nl/nl/ruimtevaart>

Keywords: secure navigation & timekeeping, monitoring urban environments

CGI has decades of experience in the development and security of complex, mission-critical space applications. Using satellite data, we develop commercial applications for various markets. Applications on satellite observation and secure navigation and timekeeping, including the monitoring of the urban environment and infrastructure, including water systems and greenhouses.

**Groundstation.space** - <https://www.groundstation.space/>

Keywords: business development, innovation, networking

DotSPACE is a not-for-profit foundation publicly funded and helping to accelerate the Space Campus ecosystem of the Netherlands. We support potential end-users of satellite applications with our network to make experience and expertise available. The foundation creates awareness in value creation of new satellite applications. We provide feedback based on fieldwork to policy makers regarding innovation and valorisation of earth observation technology.

**NEO B.V.** - <https://www.neo.nl/about-neo/>

Keywords: change detection, agriculture, energy

NEO provides unique information services starting from the changes in our habitat. Of course we keep on innovating these services. In 2021 we monitor all buildings, roads, water courses, trees, fields, etc. in the Netherlands many times per year with an unmatched accuracy and completeness. From the changes we detect, we built value-added services on offer in our API. Examples are in crop management and control, tax register updates, pipeline monitoring, tree maintenance, solar panel location and size, etc. We work with you to customize the information you use or provide to your users and customers.

**NL Space Campus** - <https://www.nlspacecampus.eu/>

Keywords: business development, networking

NL Space Campus is the gateway to the Dutch Space Cluster. NL Space Campus is where science and research are transformed into solutions and business opportunities. To explore and to address challenges for a better planet and society. Together with industry-leading companies, knowledge institutes, scale-ups and start-ups, a space business incubator and facilities NL Space Campus creates the optimal ecosystem for innovation. As a flywheel for growth the campus facilitates, stimulates and implements.

**Orbital Eye** - <https://orbitaleye.nl/>

Keywords: monitoring and inspection services of infrastructure

Orbital Eye provides Monitoring & Inspection Services: cost effective, highly accurate and up-to-date information on WHAT has changed, WHERE, and WHEN in your Areas of Interest or Right of Way. These alerts are automatically uploaded and reported to inspectors, asset managers or HSE officers, together with context information, offering maximum situational awareness.

**SurvIntel** - <https://survintel.com>

Keywords: energy, soil deformation

Survey Intelligence provides users with the tools to help understand and forecast the movement of the ground that causes stress on infrastructure. Stress that can lead to damages and ultimately to accidents. We help our clients to detect where this might happen and allow them time to take action before accidents occur. We provide our clients with an early warning system that allows the monitoring of large areas with high accuracy and cost-effectiveness.

**VanderSat** - <https://vandersat.com/>

Keywords: water, agriculture

VanderSat is a leading provider of global satellite-observed data, products and services over land with a special emphasis on water and crops. We give our customers essential insights into soil and crop conditions by applying our mathematical expertise to raw data from a constellation of satellites.
