THE REGIONAL DIMENSION OF THE PRIVATE SPACE SECTOR: SPACE4SUSTAINABLE TOURISM

What is About?

The series of webinars has the overall objective to make the cluster and SME community at the regional level more transparent and foster co-operations and partnerships among them. The idea is to stimulate new ways of cooperation within but also outside regions, and foster space business: Another important objective is to introduce the participants to new opportunities for partnerships and funding in the private and public sectors and inform them about relevant EU and ESA-programs.

All online sessions aim at:

- Presenting the NEREUS space business community (space clusters, companies, SMEs): what is their expertise and best practices; what are their strengths? Cluster competences
- Enhancing collaboration and interlinkage amongst NEREUS private space community and regional space ecosystems (clusters, companies, etc) (moderated discussion);
- Providing an overview of the recent developments/trends and challenges in the European private space sector (EU projects, new trends, investment opportunities);
- Highlighting new funding EU/ESA funding opportunities (moderated discussion);
- Exploring how the private space sector can benefit the most from EU business initiatives (ESA BIC, Defence Fund) (moderated discussion);

Target group: space clusters within and outside NEREUS, SMEs, companies, and all regional stakeholders interested in space businesses regarding the use of space technologies.

Background:

The private space sector is one of the main players to boost the capitalisation of Europe's space infrastructure. The increasing cooperation between the public and private sectors on many and diverse space domains, in particular, the downstream sector and the ongoing development of big and small private space players is vital for the future of the European space sector but also for an optimal cross-fertilisation with non-space sectors.

This online event will introduce the Network's space clusters and companies active in a wide range of domains including agriculture, maritime affairs, R&D, and telecommunication. Moreover, it will explore potential partnerships within but also outside the Network as well as debate on new EU/ESA initiatives and funding opportunities. Private space business in regions is considered one of the most valuable topics for regional strategies, development and growth. In this context, NEREUS will provide its members with the necessary information on the topic and support this cross-cluster and cross-border collaboration.

NEREUS is a European network of regions, currently comprised of 24 Member regions and 33 Associate members (including space clusters and companies). NEREUS is the only European association that represents the interests of European regions and their stakeholders (companies, clusters, etc) using space technologies while simultaneously highlighting the regional dimension of European space policy and programmes.

SPACE4SUSTAINABLE TOURISM: NEEDS OF REGIONS AND REGIONAL BEST PRACTICES – PART II ON WEDNESDAY, 8TH FEBRUARY 2023, 10 – 11.00H

Programme of the web session 2:

Short description of the session: This session focuses on the needs, challenges and tools of regional administrations/agencies responsible for tourism promotion. It will provide a forum to debate how to facilitate interaction, networking, and the development of space applications among public and private users and providers of space solutions for sustainable tourism. Pairs of public/regional user (e.g., regional tourism promotion agencies etc.), private tourism users and space technologies service providers will take the floor to explain their respective needs, challenges and the space solutions that could be found. Presentation of successful cases of the ESA call Space for Tourism. The result of this interaction between suppliers of space technologies (EO, Nav Sat, Satcom) and tourism demand operators should be a set of tools, ideas and initiatives to foster the development of pre-commercial products that address the challenges for tourism and civil society through space applications.
