

Space 4 Critical Infrastructure

Wastewater & Drinking Water

24 November 2022 | 10:00–11:00 AM CET

Climate change results in increasingly frequent water scarcity and drought. The protection of water resources is one of the cornerstones of Europe's environmental policy. The European space data stream provides multiple opportunities to make our water use more efficient. This fourth thematic session of "Space 4 Critical Infrastructures" will showcase examples such as mapping water infrastructure and detecting underground leakages.

Agenda

- Welcome and introduction by organisers
- Monitoring the health of water sewerage networks, Andrea Aliscioni of Metropolitana Milanese
- Cosmic Water Leaks
- L3Harris
- Q&A and closing remarks
