

Space 4 Critical Infrastructure

Digital Infrastructure and Health
7 March 2023 | 10:00–11:00 AM CET

In recent years, with the advent of COVID-19 and the regulation of telemedicine in some European countries, the healthcare sector is rather exposed to multiple potential risks. Identifying and ensuring the resilience of the sector and protecting national data and infrastructure takes on a different relevance today. The session will showcase how satellite technology offers to health operators the opportunity to make this sector more resilient and to better manage threats and protect health infrastructures.

Agenda

- Welcome and introduction by organisers
