Providing the future

EMPOWERING REGIONS IN THE SPACE DATA REVOLUTION

Within NEREUS' presence at BEX, we highlight the central role Regions play across the entire space-data value chain.

For Regions, BEX – Beyond Exploration Expo offers an ideal setting to showcase policies, strategies, and space ecosystems through institutional or collective exhibition areas. Taking part in BEX provides visibility at the European level and direct access to decision-makers and potential partners.

Beyond Exploration also serves as a platform for Regions to share experiences, identify synergies, and explore joint initiatives in the use of space data.

BEX – Beyond Exploration Expo is a strategic space to strengthen relevance, credibility, and high-value connections within the space-tech ecosystem. It supports structured networking with other Regions, European institutions, and industry stakeholders.

Above all, it enables meaningful relationships with institutions, partners, and decision-makers shaping the future of the space economy.

BEX: A EUROPEAN PLATFORM FOR REGIONS AND SATELLITE DATA

Bex as a Space Economy Hub: BEX serves as a European platform integrating exhibition, conference, and networking focused on Earth observation and space economy.

Regions Strategic Actors: Regions actively use satellite data as end users, regulators, and innovation promoters to enhance policy and development.

Supporting Policy and Competitiveness: Satellite data supports evidence-based policymaking, improves public services, and boosts regional competitiveness.

Alignment with European Priorities: BEX aligns with European goals on digitalisation, sustainability, resilience, and strategic autonomy in multiple sectors.

HOW REGIONS CAN PARTICIPATE AT BEX

Exhibition Participation

Regions can showcase policies, strategies, and space ecosystems through institutional or collective exhibition areas.

Networking Opportunities

BEX facilitates structured networking with other Regions, European institutions, and industry stakeholders for collaboration.

Interregional Cooperation

The platform encourages Regions to share experiences, identify synergies, and explore joint initiatives in space data use.

Visibility and Impact

Participation provides Regions visibility at the European level and access to decision-makers and potential partners.

PARTICIPATION PROPOSAL NEREUS

01 Speaker formats and policy oriented content

02 Exhibition solution 1: Regional Cluster

03 Exhibition solution 2: Institutional Stand

01 SPEAKER FORMATS AND POLICY-ORIENTED CONTENT

BEX brings together stakeholders from across the space ecosystem and adjacent industries, using keynote presentations, thematic roundtables, and targeted case-study sessions to foster collaboration, business development, and knowledge exchange.

The program highlights the role of satellite data, space technologies and applications, **cross-sector integration**, and frameworks that support market development and data-driven solutions.

Sessions are designed to support professional growth, strengthen institutional capacity, and explore organisational approaches for leveraging space-derived technologies and data across industrial sectors.

Discussions are structured around concrete business and innovation challenges, with a focus on practical outcomes that meet the needs of industry players, investors, institutions and policy makers.
